

A PRECISION TEAM - BEELINE TECHNOLOGIES AND AGLINE

BEELINE Technologies has engaged precision agriculture specialists Agline as the first Australian distributor of BEELINE Technologies Steering Assist™ products. Agline has a wide reaching dealer network, with expert sales and service staff throughout Australia, and are emerging as one of the leading precision agriculture specialists in the country. Based in Narrabri, Agline Distributors Head Office is a tangible commitment to being accessible and focused on its farming customer base.

Agline adopted BEELINE technologies as its guidance product of choice as it has become a leading global player in the provision of Steering Assist systems on self-propelled agricultural equipment. With BEELINE basing its research and development in Australia farmers can be assured of purchasing a product developed for their environment and farming systems, not having to adapt to a system developed overseas and sold on a “box and ship” basis.

The future of guidance systems lies in developing a platform of choice for sustainable agriculture applications, something BEELINE is a market leader in with its development of the ARRO and its compliance with OEM tractor manufacturer ISO and CAN bus standards. By adopting an open architecture, many additional applications are able to run in conjunction with BEELINE's positioning data, such as the KEE Zynx system with its yield mapping and variable rate applications. Farmers when selecting a guidance system are encouraged by Agline Distributors Managing Director Ross Hubbard, “to ensure they are “future proofing” their investment so it can support their adoption of other technology down the track”.

BEELINE technologies guidance systems can be found at the Henty Field Days in the Precision Ag Pavillion O beside Omnistar.
